

DATA INSIGHTS THAT DRIVE PERFORMANCE

TerraGo StreetlightOps Analytics gives customers the information they need to meet and exceed project milestones, operating objectives and customer expectations. Analytics brings together sensor data from your smart streetlight systems, like Itron's industry-leading SLV platform, as well as data from GIS, work order and asset management platforms to enable insights that help cities and utilities work smarter. With TerraGo's Analytics software you can harness cross-platform information and turn data into answers that accelerate streetlight installations, optimize inventory management, reduce maintenance costs and increase operational efficiency.

KEEP PROJECTS ON TRACK & SYSTEMS ON LINE

Which contractors and crews are achieving daily installation quotas? Where are the most common errors requiring return trips and re-rolling trucks? Is my smart streetlight program on track to achieve our estimated energy savings? How can I report progress to the city and other stakeholders? Analytics provides answers to the questions that drive performance. And with powerful data visualization, it helps uncover answers to questions that otherwise might not have been asked at all.

READY TO GO AND CUSTOM DASHBOARDS

Analytics provides out-of-the-box dashboards for common customer data views like program status, installations, failures and exception reports, as well as the ability for customers to build custom dashboards that shed light on their unique operations and underlying project, system and sensor data sets.

FEATURES

- On-demand analysis for detailed insights into your smart city streetlights program
- Pre-configured dashboards for quick and easy access to program status, installations, failures and exceptions
- Track installation and maintenance crew progress on a monthly, weekly or daily basis
- Up-to-the-minute access to data collected in the field to ensure accurate results
- Flexibility to build your own analysis dashboard based on your data stored on the TerraGo server

ON-DEMAND AND ON-TIME

Analytics provides users with immediate access to up-to-the-minute data from the field, so supervisors can manage crew progress and not wait for monthly project reports that come too late, which means they can solve problems when they occur. Analytics provides the ability to measure monthly, weekly or daily performance, but it also enables users to tap into the current field activities and state of operations. With on-demand ability to filter, sort, query and visualize cross-platform data, Analytics helps identify patterns and predict deployment and maintenance issues that can be eliminated with process improvements and quality controls. With access to valuable data and tools that reveal insights, streetlight program managers can stop flying blind and start optimizing performance.

ABOUT TERRAGO STREETLIGHTOPS

TerraGo StreetlightOps gives your smart streetlight programs the best of both worlds, with out-of-the-box, field-proven, award-winning smart streetlight features AND a platform entirely customizable and configurable to your requirements.

TerraGo StreetlightOps provides five modules that span the full system life cycle, seamlessly integrated to deliver everything your program needs and nothing it doesn't.

BENEFITS

- Meet or exceed deployment and conversion project schedules, milestones and goals
- Reduce streetlight installation times and errors by identifying root causes and personnel performance problems
- Manage contractors, crews and employees against goals with accurate performance data
- Improve maintenance service levels with outage resolution and underlying diagnostics data
