

## Break Down Data Silos

TerraGo's Integration Platform as a Service (iPaaS) greatly reduces the time, cost and complexity of systems integration and simplifies interfacing with back-office platforms.

### A COMPREHENSIVE INTEGRATION SERVICES SOLUTION

By delivering iPaaS, TerraGo doesn't just develop integration software, but provides a comprehensive solution where we deliver, operate, monitor and maintain these interfaces as part of our comprehensive SaaS offering, replacing expensive and difficult-to-maintain systems integration with reliable, worry-free, hands-off operations.

### DRIVES EFFICIENCY AND LOWERS O&M EXPENSES

TerraGo's iPaaS helps customers realize numerous efficiencies across teams by breaking down departmental data silos and presenting one unified mobile app to the field crew. For instance, crew members can use one app to instantly control smart lighting devices (via CMS), access asset data (via EAM), update GPS coordinates, capture photos and correct attributes (via GIS, EAM), correct billing omissions (via CRM), update asset inventories (via ERM) and complete work orders (via MWM) – all with one simple workflow. Integration does more than simply share data; it increases revenue, reduces truck rolls, lowers operating expenses and accelerates energy savings.

### CONFIGURATION NOT CODING

TerraGo's iPaaS is an intelligent, configurable data synchronization and application interface that establishes and manages direct, secure, 2-way API's between the TerraGo server and back-office platforms. The approach is powered by a zero-code integration management console. The result is a powerful way to enable field operations to access and update numerous platforms with one easy-to-use application.

## FEATURES

- Securely manages platform data interfaces
- Monitors and maintains all services 24x7
- Configures interfaces with zero-code console
- Defines customer-specific business rules
- Provides change management for exception reviews

## DIGITAL TRANSFORMATION FOR FIELD OPERATIONS

Today's city and utility work crews often juggle numerous paper forms and mobile applications to overcome the fragmented, legacy, departmental back-office platform environment. TerraGo's iPaaS delivers on the promise of integration and digital transformation by providing crews with one app that connects the dots for smooth, efficient field operations. The approach is based on a field-first view of how work gets done in the field. By providing the data and crews need with a holistic workflow, the job gets done fast, right and correctly the first time. And nobody needs to manually re-key chicken scratch notes or paper forms prone to error. Quality is built-in with iPaaS so enterprise data gets in sync and stays in sync, as part of successful daily operations.

## ABOUT TERRAGO STREETLIGHTOPS

With over 3 million streetlights under management and trusted by global leaders, including 8 of the 10 largest US utilities, Exelon, Dominion Energy, the City of Chicago, City of London, Glasgow, Jamaica Public Service and many more, TerraGo StreetlightOps is the world's only software platform focused on streetlight operations. With unmatched domain expertise, TerraGo StreetlightOps accelerates energy savings and lowers operations and maintenance costs by improving efficiency at every stage of the lifecycle, from planning and inventory to installation, maintenance and work orders.

## BENEFITS

- Works with all leading security and authentication frameworks
- Delivers Hands-off, worry-free integration
- Replaces expensive one-off system integrators with modern SaaS
- Supports data-driven business rules
- Enables departmental review/control of systems of record
